Summary

Highly motivated Computer Science student with a specialization in Data Analysis. Proficient in designing and implementing ETL pipelines, performing in-depth data analysis, and creating insightful visualizations all using tools like Python, SQL, PySpark, Databricks, and Power BI. With a strong foundation in Machine Learning and Data Engineering, is eager to solve complex real world problems.

Skills

- **Technical Skills:** Python (also NumPy, Pandas, scikit-learn, Seaborn, Matplotlib, Keras, Tensorflow etc.), SQL, Databricks, Data Visualization, Data Engineering, Data Analysis, Machine Learning, Deep Learning
- **Computer Software:** MySQL, OracleSQL, MS Excel, MS PowerBI, VSCode, Jupyter Notebook
- **Soft Skills:** Communication, Problem Solving, Attention to Detail, Active Listening, Critical Thinking

Education

Birla Institute of Technology, Mesra, BTech in Computer Science

[Link to Scorecards](#)

- CGPA: 6.91 (6 semesters)
- Nov 2022 - Present (Ends Jun 2026)

Experience

Data Engineering Intern, Tredence Inc. – Pune

[Link to Letters](#)

- Jun 2025 - Aug 2025 (Completed)
- Performed ETL operations on real estate data using PySpark to process raw data, do transformations like fixing null values, and finally store it in a delta table in Databricks.
- Performed EDA on formed delta table using Spark SQL queries and answer various "client" questions.
- Prepared a dynamic dashboard for the "client" highlighting various KPIs and other graphical representations using PowerBI.

Projects

AAPL Stock Price Prediction, Aug 2025

[Link to Project](#)

- Built an LSTM-based time series forecasting model for Apple stock prices using Keras and TensorFlow.
- Preprocessed stock data from Yahoo Finance with MinMaxScaler, created sequential datasets, and implemented early stopping and learning rate reduction for optimal training and visualized actual vs. predicted prices with Matplotlib, demonstrating the model's predictive performance.
- Tech Stack: Python, NumPy, Pandas, scikit-learn, Keras, TensorFlow, Matplotlib, Jupyter Notebook

ETL Pipeline and EDA on Real Estate Data, Aug 2025

[Link to Project](#)

- Created an ETL pipeline for a dataset containing real estate data and stored it into a delta table.
- Performed EDA using SQL and made a dashboard in PowerBI. This is also my internship project.
- Tech Stack: Python, Jupyter Notebook, PySpark, Databricks

Restaurant Analysis Dashboard, Jul 2025

[Link to Project](#)

- Analyzed Zomato restaurant data using SQL, Excel, and PowerBI to uncover insights on ratings, pricing, etc.
- Built a dynamic dashboard to visualize trends in customer preferences and restaurant performance.
- Tech Stack: SQL, MySQL, PowerBI

Sales Data Analytics Report using Excel, May 2025

[Link to Project](#)

- Built a dynamic Excel dashboard based on coffee shop sales (2015-2019).
- Used slicers and timelines for filterable visualizations.
- Tech Stack: MS Excel
